Write a function employee(empid, name, salary) and call the function by changing the order of the arguments using keywords.

Your Code

```
1 def employee(empid, name, salary):  
2     print("Employee ID:", empid)  
3     print("Name:", name)  
4     print("Salary:", salary)  
5  
6 employee(name="Chintha Abhilash Reddy", empid=192525462, salary=50000)
```

Input

Chintha Abhilash Reddy
192525462
50000

Output

Employee ID: 192525462
Name: Chintha Abhilash Reddy
Salary: 50000

Q2 Keyword Arguments

5 marks

Write a function book(title, author, price) and display the book details using keyword arguments.

Your Code

```
1 def book(title, author, price):  
2     print("Book Details")  
3     print("Title :", title)  
4     print("Author:", author)  
5     print("Price :", price)  
6  
7  
8 book(title="The Alchemist", author="Paulo Coelho", price=500)
```

Input

The Alchemist
Paulo Coelho
500

Output

Book Details
Title : The Alchemist
Author: Paulo Coelho
Price : 500

Write a function that accepts any number of integers and returns their sum.

Your Code

```
1 def add(*args):  
2     return sum(args)  
3  
4 nums = list(map(int, input().split(',')))  
5 print(add(*nums))
```

Input

1,2,3,4

Output

10
